PROJECT ABSTRACT

This project proposes a video-conferencing application that integrates Indian Sign Language recognition using MediaPipe, WebRTC, and LSTM. The proposed system is aimed at facilitating communication for hearing-impaired individuals who use Indian Sign Language as their primary mode of communication. The system recognizes and translates sign language gestures in real time, enabling seamless communication between hearing-impaired individuals and non-sign language users. The system's implementation involves using MediaPipe's pose estimation model to capture hand gestures, converting the captured data into a sequence of feature vectors, which are then input into an LSTM-based neural network for classification. The WebRTC technology is used for real-time video and audio communication between the two individuals.

PROJECT ABSTRACT

Agriculture industry is the main source of the world's food supply. It occupies a significant position in the Indian economy and stands for the backbone of India. Farmers today are facing the problem of low awareness about government schemes, and fertilizers, and don't have access to information about soil properties, seeds, recently used tools, fertilizers, etc. To meet all the requirements of farmers, this system will go through the implementation of various improved ML algorithms and deliver an Assistant system that helps the farmer to connect and enlarge the cultivation with enhanced accuracy. This system uses XGBoost Machine Learning Algorithm for crop recommendation and Fertilizer recommendation, and Resnet algorithm for plant disease classification. It also incorporates other features like crop rotation, weather prediction and Localization for assisting farmers.
